

IC High input voltage LED source driver BD8372HFP-M/BD8372EFJ-M

●Description

BD8372HFP-M/EFJ-M is a LED source driver with the capability of withstanding high input voltage (50V Max.).

The fixed current output can change in the H/L current, and it is the best for automotive LED drive. It is built into LED open/short protection, external resistance open/short protection and overvoltage overheating protection, and high reliability can be achieved.

When driving two or more LED by using two or more IC, it can be done to control LED all together turning off even if LED causes short/open in a certain row.

●Features

- 1) Input voltage range 5.5 to 40V
- 2) Changeable type fixed current source driver(200mA Max.), Current accuracy $\pm 3\%$ ($V_{IN}=13V$, $T_a=25^\circ C$)
- 3) H/L Current setting switch control
- 4) Built-in LED open/short protection circuit
- 5) Built-in ISET open/short protection circuit
- 6) Built-in overvoltage overheating protection and temperature protection circuit
- 7) Error state output detection function(PBUS)
- 8) HRP7/HTSOP-J8 package

●Applications

For automotive (Rear lamp, Interior light, etc.)

●Absolute Maximum Ratings ($T_a=25^\circ C$)
